ABSTRACT

This unannotated bibliography lists over 400 works, published between 1924 and 1971, dealing with the phonology of about 30 languages whose speakers are frequently taught English. For these languages, the bibliography includes as complete as possible a listing of studies within the generative framework. Where the coverage by generative treatments is spotty, insightful "traditional" treatments are also included. References are also given to works on contrastive analysis and to bibliographies containing references to phonological works dealing with other languages than those covered here. Included is a language index for the bibliography. (Author/VM)

ABSTRACT

The bibliography contains works dealing with the phonology of about thirty languages whose speakers are frequently taught English. For these languages, the bibliography includes as complete as possible a listing of studies within the generative framework. Where the coverage by generative treatments is spotty, insightful 'traditional' treatments are also included. References are also given to works on contrastive analysis, and to bibliographies containing references to phonological works dealing with other languages than those covered here. Included is a language index for the bibliography. [bibliography, generative phonology, phonology, TESOL, contrastive analysis]

A BIBLIOGRAPHY OF (MOSTLY) GENERATIVE SYNCHRONIC PHONOLOGICAL STUDIES OF TESOL LANGUAGES

Preliminary comments

This is not an exhaustive bibliography of generative phonological studies. The languages covered are those whose speakers are most frequently taught English. Many of these languages have not been examined in much detail from the generative point of view, and for these languages especially, revealing non-generative treatments have been included. The purpose, after all, is to give the English teacher the wherewithal to construct his own contrastive analyses, which requires insights into the structures of both languages. Generative phonologists, of course, their putatively superior theoretical stance notwithstanding, do not have a corner on insight. For the languages listed, however, the attempt has been made to give an exhaustive list of generative studies. No annotations have been made.

Most of these studies concentrate on, and indicate, the competencies of speakers of the language in question. That is, they are concerned primarily with the underlying phonological structure of the language and interrelationships among forms. For more detailed discussion of generative phonology, further references, and some suggested applications of generative phonology for TESOL, see Fidelholtz (forthcoming b).

Most contrastive studies, contrary to most generative studies, concentrate on the phonetic differences, although a few contrast competencies as well. References to contrastive studies for individual languages can be found in Hammer and Rice (1965), Nilsen and Nilsen (1971), and Thiem (1969 a,b); and more general bibliographies in Overby (forthcoming) and Selinker (forthcoming). See also Weinreich (1953, 1957), Lado (1957: Chapter 2), and

Commonwealth Office of Education (1961--for Spanish).

For other languages, see the bibliography and index in *The Sound Pattern of English* (Chomsky and Halle 1968), and the index of Hockett (1955) for earlier studies. Also, for individual languages, see the penetrating comments in Trubetzkoy (1969: language index), and Meillet and Cohen (1952). Further bibliography may be found in Krenn and Müllner (1968), Schane (1968b), LLBA (1967-), Bibliographie linguistique (1939-), and General linguistics (1970: 10:4--and annually thereafter).[1]

FOOTNOTES

[1]Several people have been very helpful in providing references which I would probably otherwise have missed. I would especially like to mention William Gage, W. S.-Y. Wang, William Stewart, Mary Levy, James McCawley, Paul Kiparsky, Larry Nessly, C.-J. N. Bailey, and R. J. Di Pietro. Gaps will ineluctably obtain, because of limitations in the author's sedulousness, but they should be minimal for most of the languages. It should be noted that, while LLBA is quite up-to-date, and General linguistics somewhat less so, Bibliographie linguistique has a lag of about three years. Thus, within the limits of the sources available to the author, and subject to the preceding disclaimer, the bibliography is current as of Fall, 1971.
